Daniel Torres

Sales Engineer

Specialized in Port & Terminal Automation
Solutions

Cement

Drive and automation systems built to withstand high heat, dust, and heavy loads in cement production.

[Learn More](#)

Metals

The leading force in ferrous and nonferrous metals production

[Learn More](#)

Mining

High-torque motors, drives, and power factor correction systems for hoists, mills, conveyors, and excavators.

[Learn More](#)

Oil & Gas

Reliable motor and drive systems engineered for harsh environments and critical pumping, compression, and refining.

[Learn More](#)

Paper

Integrated systems for moisture-resistant, continuous operation in paper and pulp production lines.

[Learn More](#)

Ports & Terminals

Crane automation, yard control, and electrification solutions for faster, safer, and cleaner port operations.

[Learn More](#)

Renewable Energy

Scalable inverter and energy storage systems for solar, hybrid and grid-tied applications

[Learn More](#)

Rubber and Plastics

Medium-voltage drives and motors optimized for mixing, extrusion, and pelletizing processes.

[Learn More](#)

Who we are?

TMEiC
We drive industry

Beyond Technology, a Long-Term Partner

At TMEiC, we go beyond technology – **we partner with terminals** to evolve into smarter, safer and more efficient operations.

Not just projects, but a **complete ecosystem**.

Flexible solutions adapt to each terminal.

Integrated Automation, Digitalization & AI.

Scalable growth aligned with customers needs.

Global leader in terminal automation

20

Years Leading

Terminal
Projects
Worldwide

Delivering measurable gains in safety,
efficiency, and performance:

Safety
Improvement

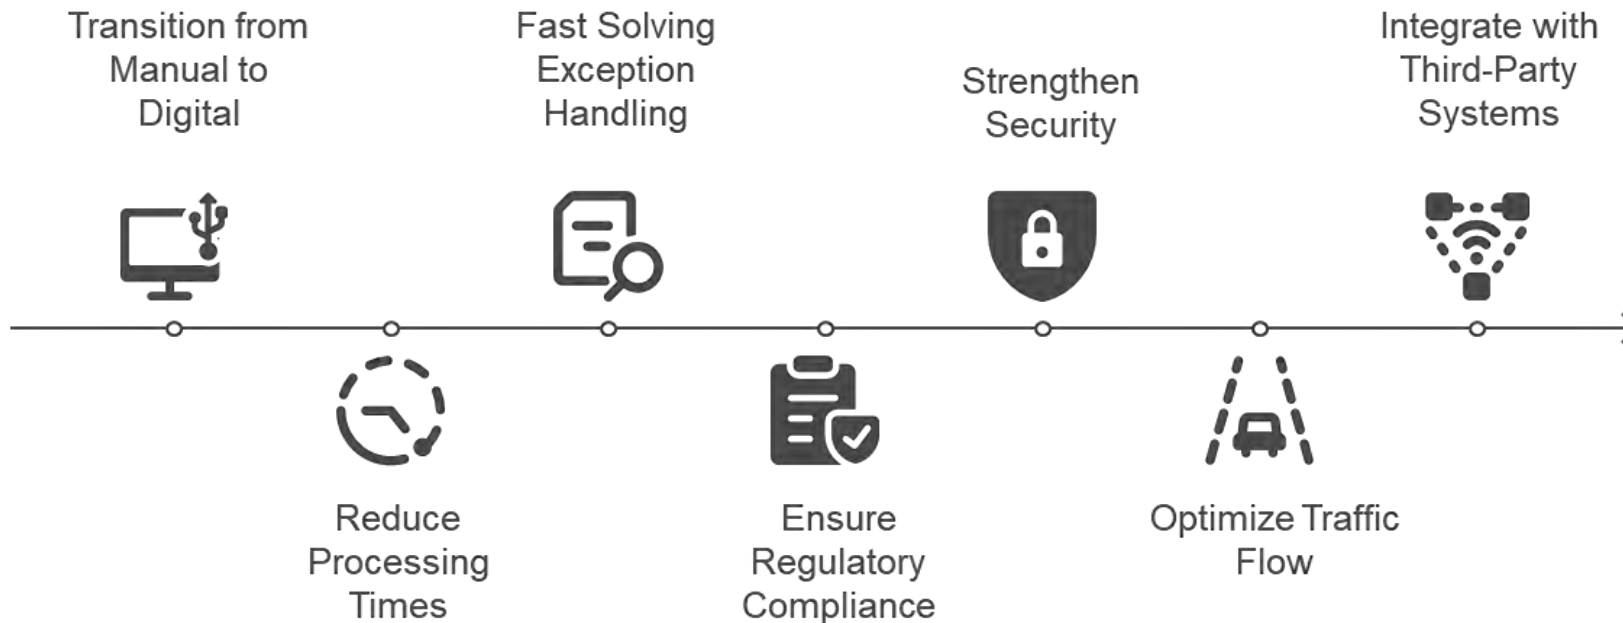

Cost
Efficiency

Smart Vision value

The objective of the Smart Vision system is to optimize traffic management and reduce inefficiencies in the flow of vehicles and cargo units entering and exiting the terminal, whether maritime, rail, or inland logistics hubs

Benefits of the Smart Vision

Together, these technologies empower our clients to:

Improve protecting people at terminals

Boost efficiency through automation and real-time visibility

Cut costs and turnaround times with optimized workflows

Scale operations flexibly to meet growing demand

Resolve exceptions instantly with digital collaboration

Eliminate manual errors and reduce risk

How We Deliver It

Smart Vision is not a single product – it is a complete delivery model powered by TMEIC's ecosystem

Engineering

Designing advanced automation solutions that boost performance

Process Optimization

Digitalizing terminal processes for maximum efficiency

Customization

Tailored solutions for each customer's unique needs.

Turnkey Projects

Complete, ready-to-deploy automation from design to go-live.

Modularity & Scalability

Ensuring projects and systems can grow in capacity and functionality with latest technology.

Smart Vision Solutions

TMEiC
We drive industry

From Vision to Data: One Integrated Solution

We bring together the best of automation, AI, and digitalization to transform terminal operations:

AI-powered vision algorithms

Real-time data capture & digitalization

Access Automation

Advanced software & control solutions

Seamless TOS integration

Big Data analytics

Full Terminal Coverage, One Ecosystem

Each module plays a role – but their true value comes from working together under one unified vision.

Crane – Smart Vision

- › Real-time registration of trucks and containers (in/out)
- › Eliminates manual entry risks
- › Validates seals and codes automatically

Rail – Smart Vision

- › Automates container registration
- › Minimizes manual work
- › Detects discrepancies with TOS manifest
- › Full traceability across intermodal connections

From Recognition to Understanding

These recognitions apply seamlessly across all operational areas – providing unified visibility and accuracy, everywhere

LPR System

Captures vehicles registration number

DMG Recognition

Detects container's structural damage

TARE Recognition

Container's net weight

CCR

Container's code recognition

CDD

Container's door direction

Max Gross

Container's maximum load

ISO code

Recognizes containers size and codes

Wagon Recognition

Recognizes container codes on railcars

DMG Measurement

Detects and measures container's damage

IMO code

Identifies hazardous pollutants

GENSET

Recognizes freezer units on containers

Heavy Load Identificatory

Recognizes heavy loads containers

Seal Recognition

Verifies integrity of containers seal

CCHR

Chassis code identification (for internal trucks)

UN Code Identificatory

Recognizes dangerous plates

Artificial Intelligence: The Heart of Our Next Generation Systems

**We're taking automation
beyond recognition –
towards decision-making.**

Our AI-driven approach transforms every image, event, and alert into actionable intelligence.

- Proprietary AI solutions for terminal automation
- Deep learning for damage and OCR optimization
- Predictive analytics for proactive maintenance
- Scalable, future-ready architecture

Crane Smart Vision

Crane Smart Vision system for container inspection provides a solution for an exhaustive code control of containers that have been loaded or unloaded from STS Cranes to/from the vessel.

Real Time Spreader's Monitoring

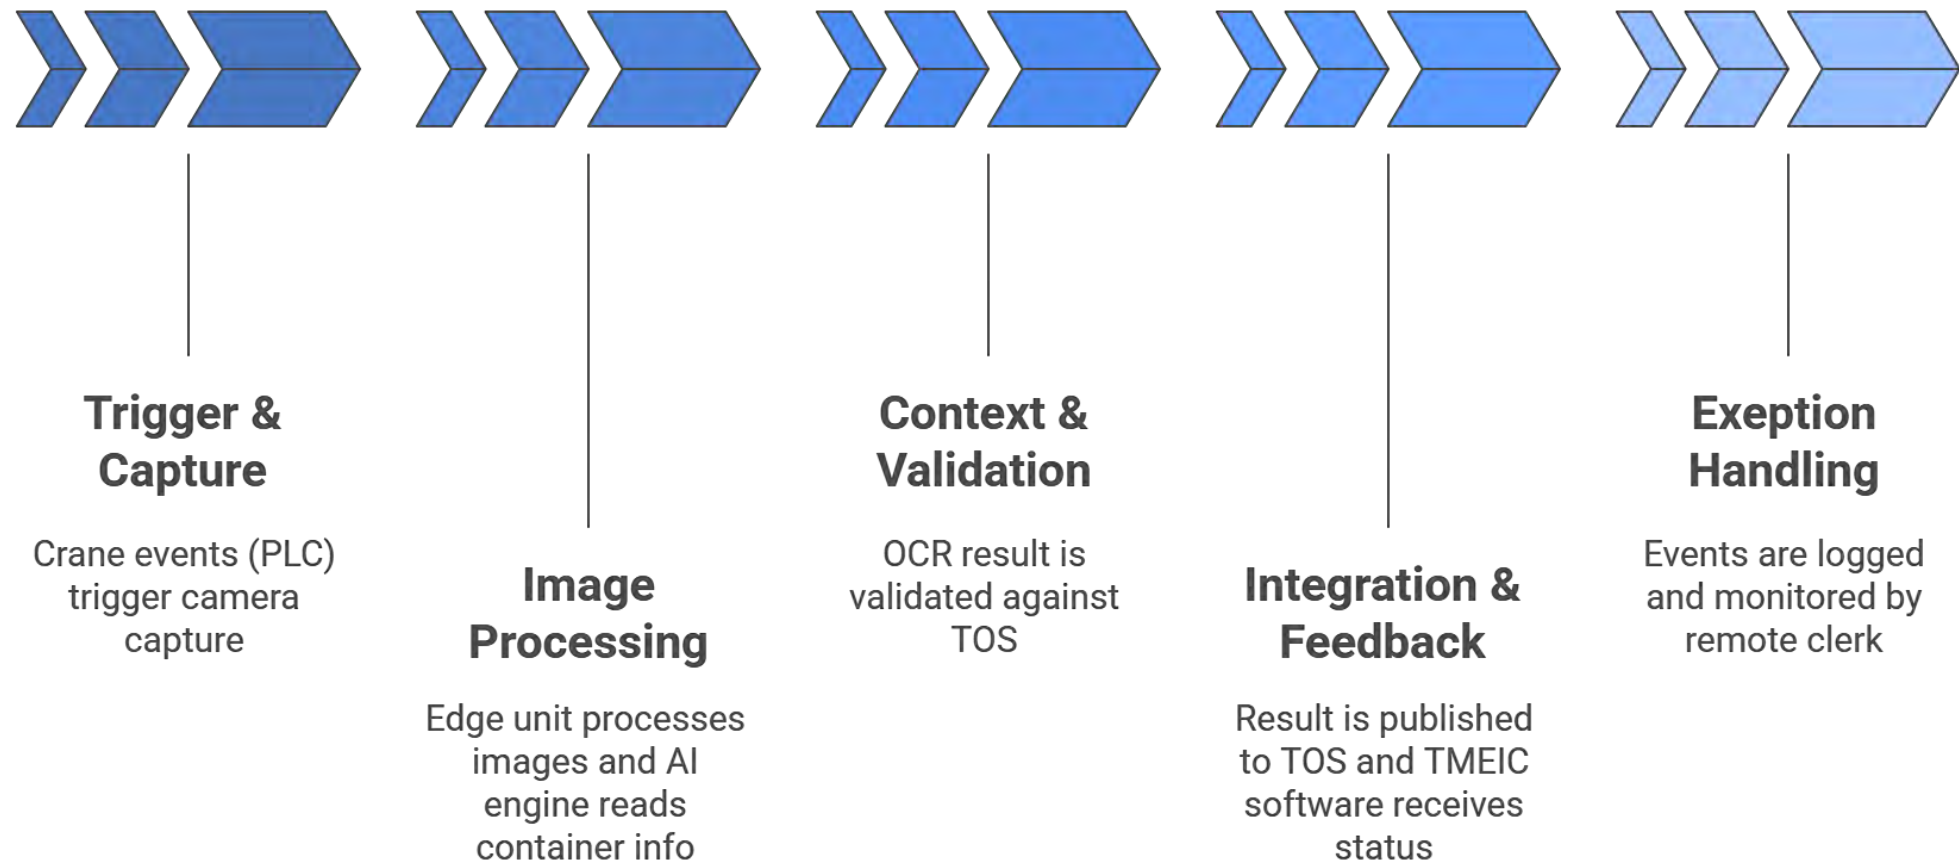

Movement Identification

**Image Capture
Optimization**

Crane Smart Vision – Process Flow

Crane Smart Vision Process Flow

Event-Driven Capture – Integrated with Crane PLC

Crane Smart Vision – Portal Beam Camera Position

- Cameras are installed on the bottom side of the portal beam
- A dedicated position that is fully protected and no introduces additional safety risk for the crane or personnel or handling equipment.

Crane Smart Vision – Sill Beam Camera Position

Truck Position System

TMEiC
We drive industry

Truck Position System: From Gate to Crane

TPS ensures trucks are perfectly aligned for loading/unloading under the spreader, regardless of lane or entry direction.

It is **how we connect data with movement** – turning precision into productivity.

Main features & benefits:

High-Precision
Laser System

Driver Guidance
Displays

Optimized Truck
Alignment

Compact &
Modular Design

Container
Dimension
Recognition

Available for
STS & RTG

TPS Solution for RTG Yard Crane

- Compact and modular design enables easy installation on RTG crane structures.
- Single scanner per RTG ensures efficient operation with minimal hardware.
- Low maintenance: The system requires little to no upkeep.
- TPS engineering software provides real-time data visualization, including:
 - Distance to target
 - Container type
 - Positioning time and direction
 - Twist-lock status
 - Spreader position

TPS Solution Live

Gate Smart Vision – Portal Beam

Gate Smart Vision – Kiosk

Gate Smart Vision – OCR Portal Layout

Gate Smart Vision – Kiosk Lane Layout

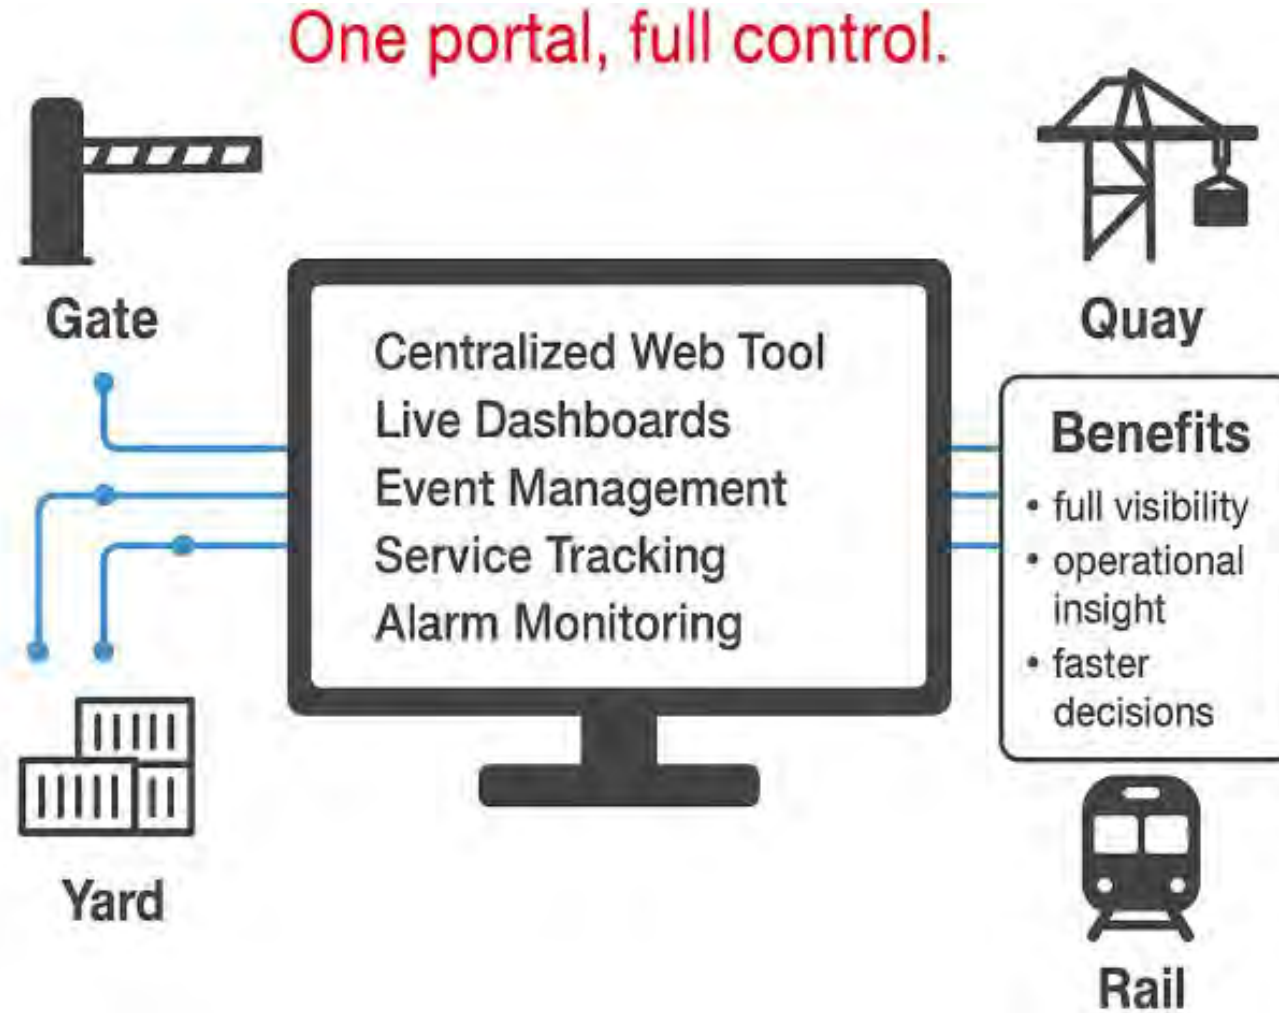

Our Products Functionalities

TMEiC
We drive industry

Unified Management Suite

Exception Handling

How we handle exceptions, defines efficiency.

Functionalities:

- Real-time correction of container data
- Register and manage exceptions per area
- Access live and recorded images instantly
- Perform remote verifications efficiently
- Modular and scalable, adaptable per operation area

Operations Viewer

One source of truth for every container transaction.

Consolidation of all operational data into one intuitive interface

Key features:

- Complete historical listing of Gate, Crane and Rail transactions.
- Full inspection details, including recoding history
- Direct access to transaction images stored on the file server
- Detailed transaction views with data, images, and recoding info
- Alarm history for enhanced monitoring and control
- TOS transaction information seamlessly integrated
- Export transaction list to Excel or PDF for traceability and documentation.

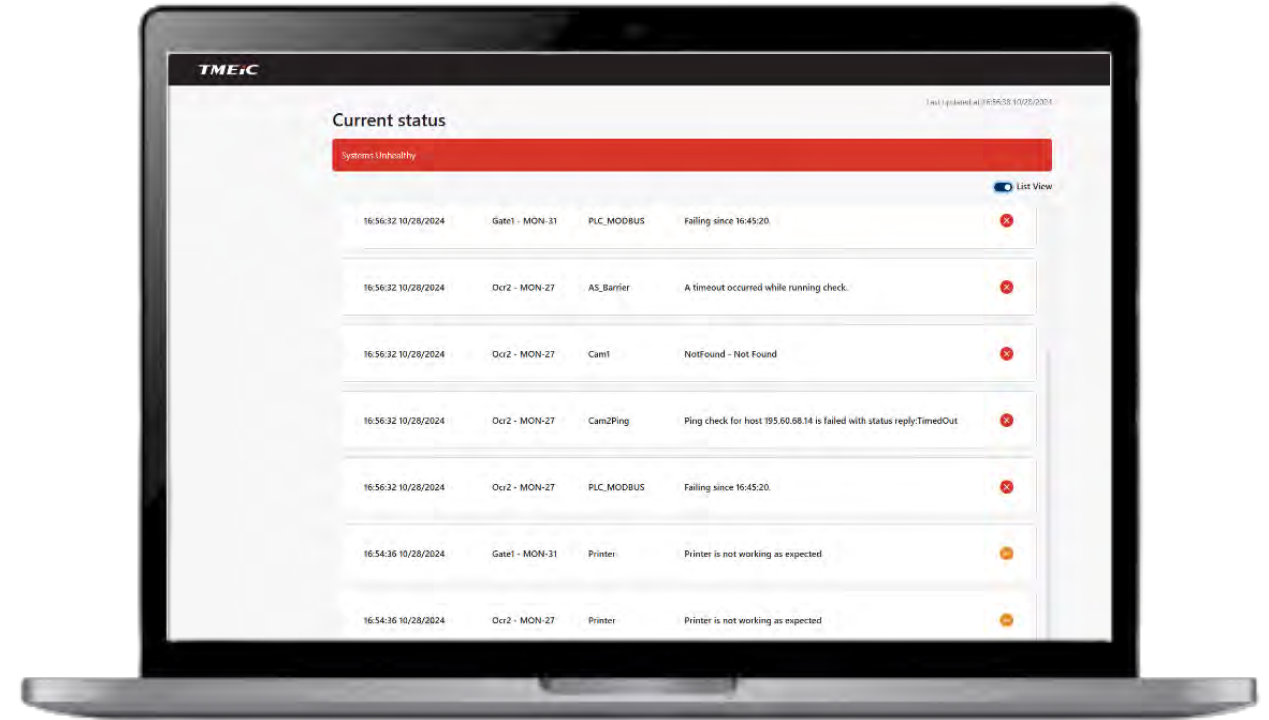

Alarm & Performance Monitoring

We bring all system health data together.

Key features:

- Real-time monitoring of hardware and software performance
- Unified access to multiple operation stages (gates, rail, yard, cranes) with historical data
- Centralized dashboard of active alarms for instant visibility
- Configurable alerts sent to clerks with custom alarm settings.
- Seamless integration with Teams, email, and push notifications.

KPI Dashboard: Turning Data into Actionable Intelligence

Data-Driven Decision for Every Operation Area

Functionalities:

- Real-time monitoring of operational and system KPIs
- Traceability by area: Gate, Crane, Yard, Rail
- Custom dashboards by user or department
- Detects performance trends and bottlenecks early
- Enables proactive decision-making

From metrics to meaning – helping teams anticipate, not just react

Technical Services

TMEiC
We drive industry

From Maintenance to Evolution

At TMEiC, maintenance is not just about fixing - it is about optimizing.

Traditional maintenance reacts to problems.

Our proactive lifecycle management anticipates them – reducing total cost of ownership and ensure long-term uptime

Together, we extend not only the life of your systems, but also the value of your investment

We don't just fix systems. We keep them improving – ensuring reliability, performance and technological relevance over the years

Strategic Scalability

Tailored coverage through modular add-ons:

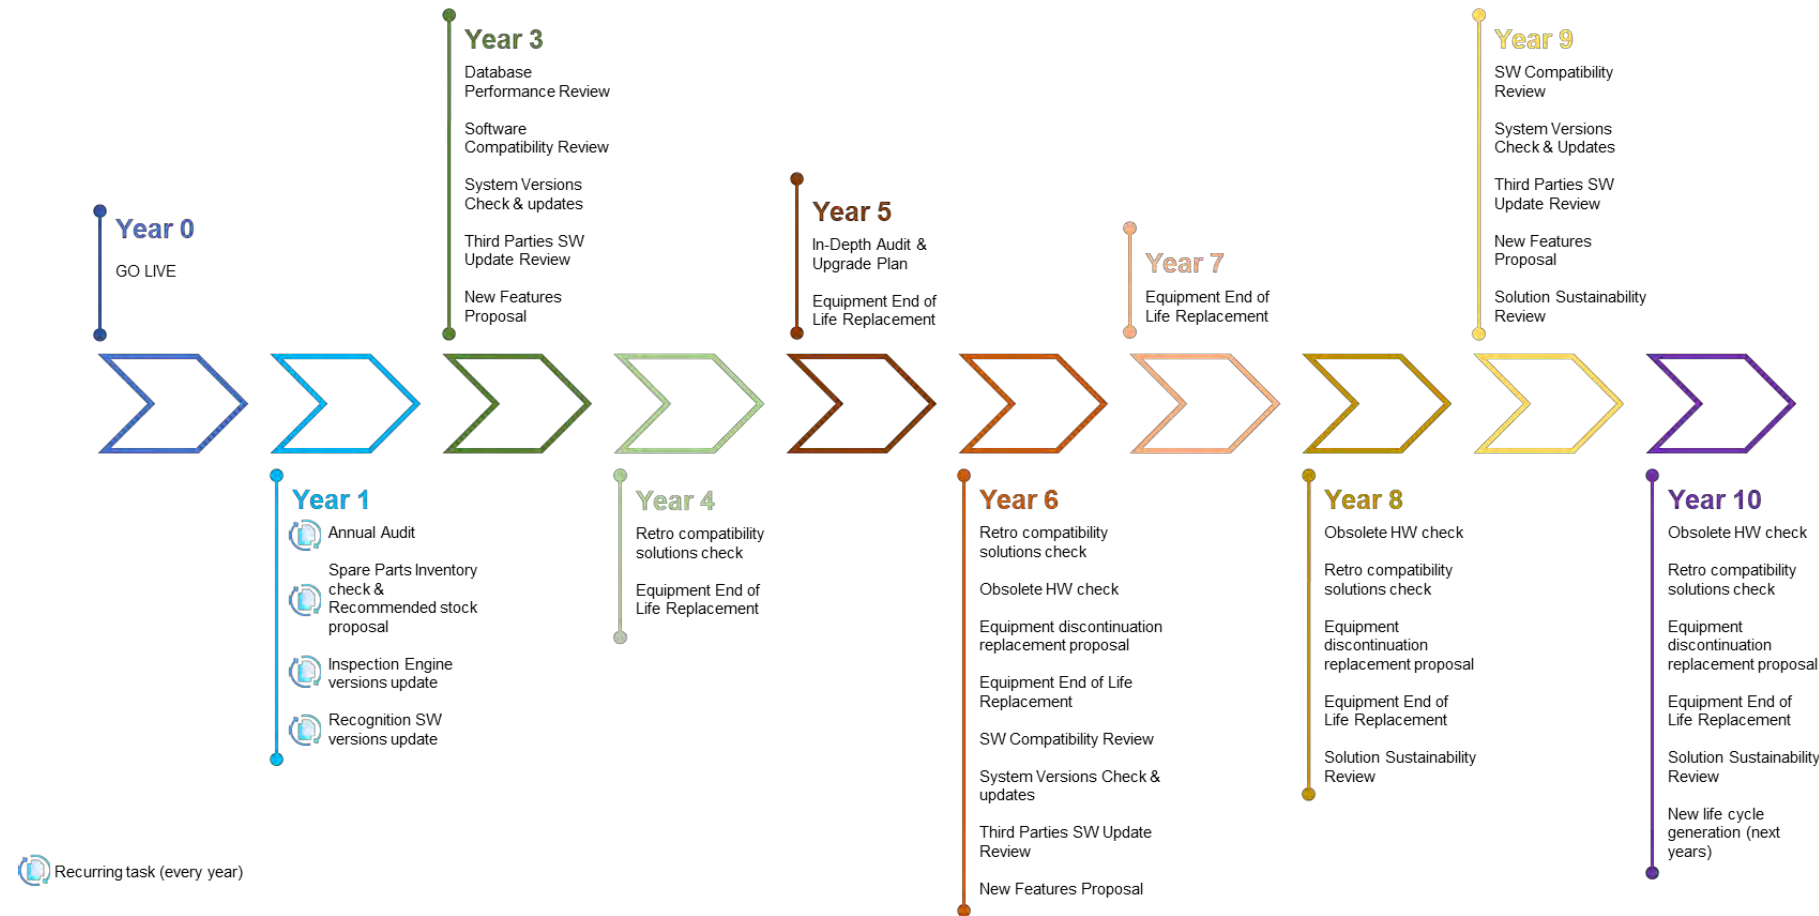

- ☐ **Advanced Technical Skills transfer.**
- ☐ **24/7 on-site HW support.**
- ☐ **Extended Warranty.**
- ☐ **On-site Preventive Maintenance.**

Proactive service means no surprises – only performance
