

# Utilization of Micro Algorithms & AI for Optimizing Terminal Operations

Violin

# Bolero

By Maurice Ravel

Arr. Fabio Eduardo de Oliveira

$\text{♩} = 60$

1 2 3

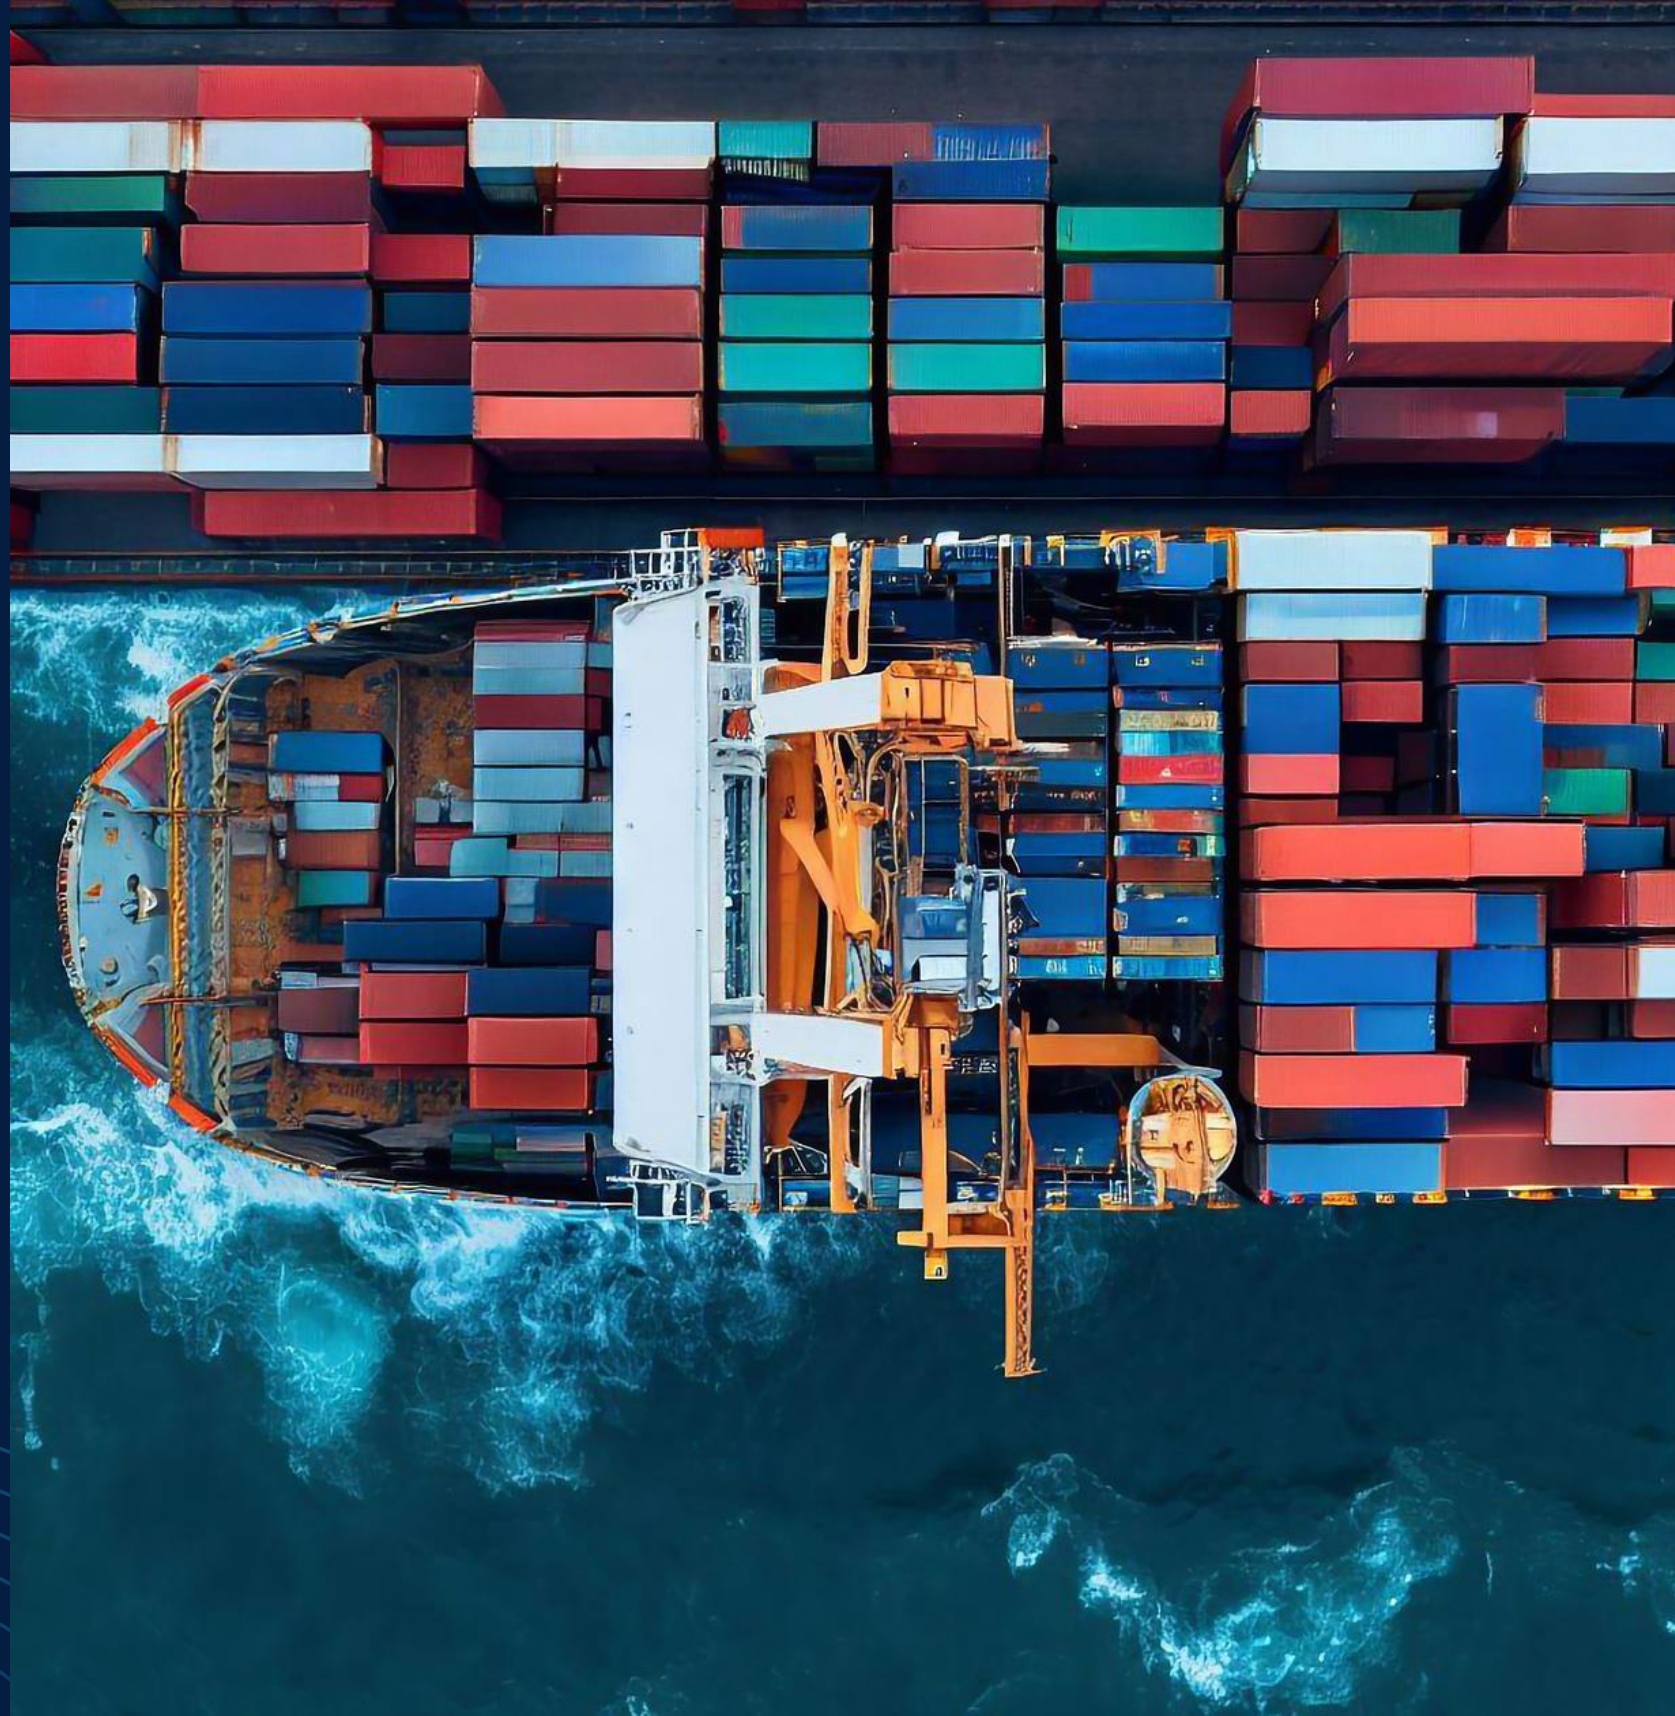

## SOLUTION

- A musician skillfully playing an instrument faces challenges as layers of melodies are added.
- Using a single tool for multifaceted tasks leads to inefficiencies and errors, disrupting operations.
- Adding new functions makes compositions more complex, requiring continuous improvement.
- The instrument becomes bulkier and less pleasant to use.

# THINK DIFFERENT

- Conducting an orchestra, collaborating with experts to orchestrate solutions effectively
- Hearing each instrument separately and noticing errors
- Operating like a conductor, directing the orchestra
- Resulting in perfect harmony

# CHALLENGES OF TERMINAL OPERATIONS

## Scarcity of Resources

Geographical limits  
Expensive equipment

## Need For Speed

Manage heavy container traffic  
Increase Container Turnover

## Operating Expenses

Extra moves = Extra cost  
Dislocated containers

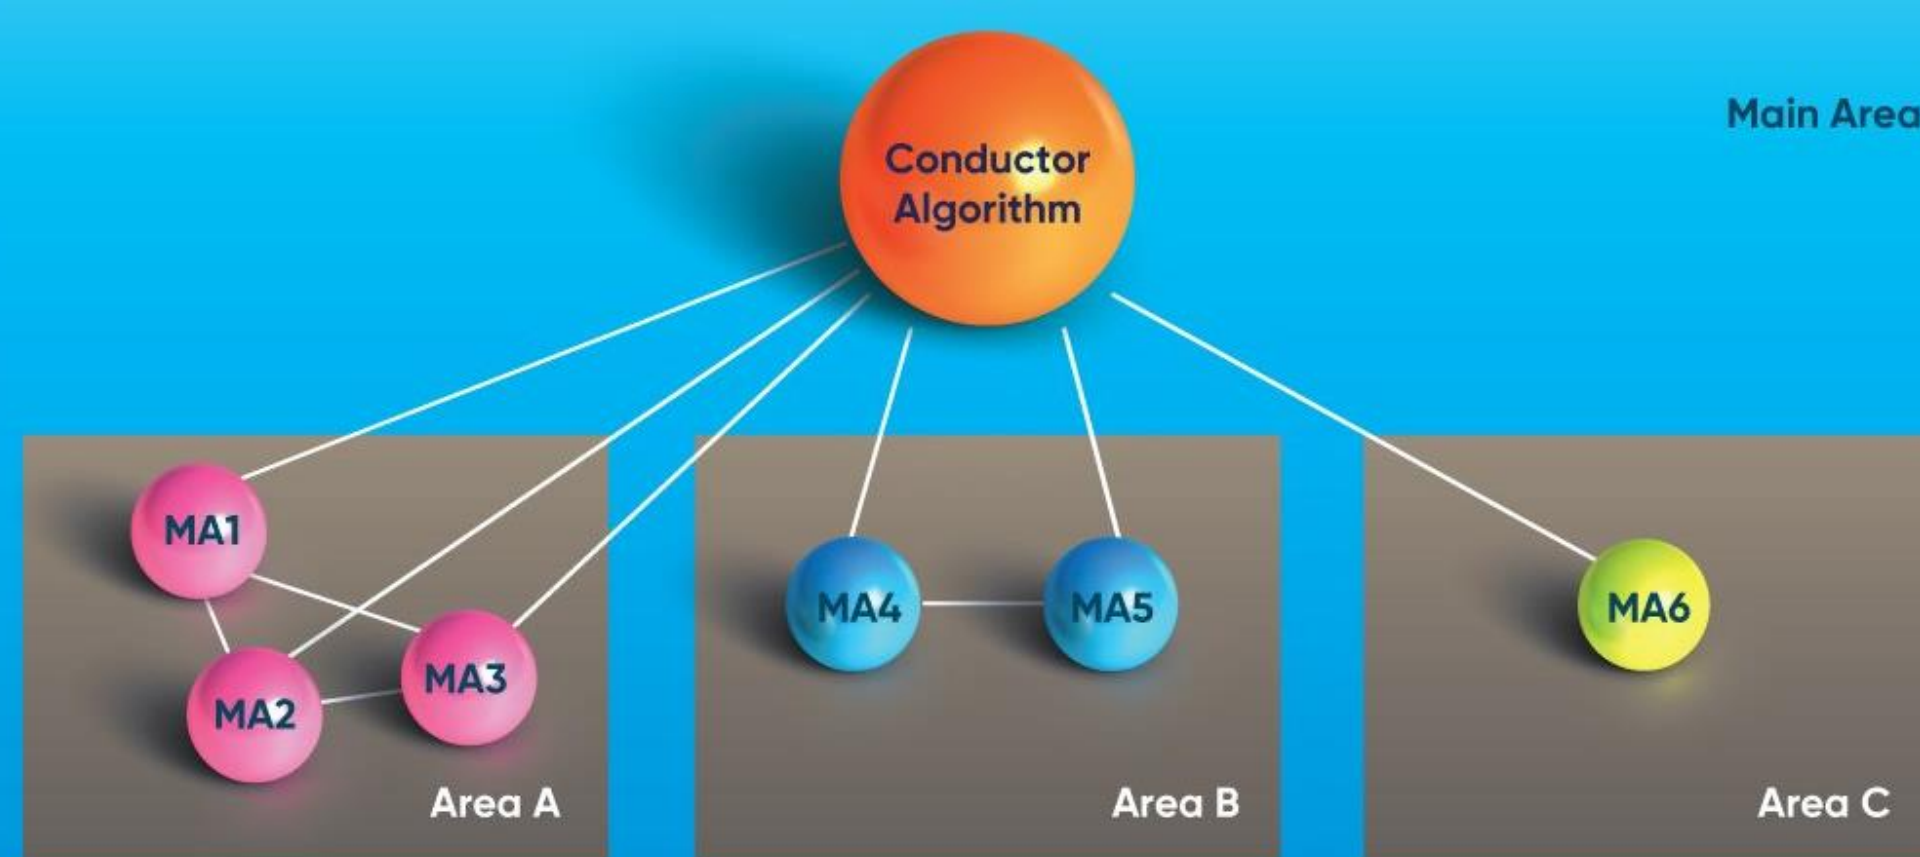

## Understanding the Big Picture

Manage overall operations  
Manage cost & revenue

# CHALLENGES OF OPTIMIZING TERMINAL OPERATIONS

- Difficult to manage and modify large and complex software structures
- Not adaptable or flexible
- Produces results slower
- Eventually turns into a bulky algorithm

# THINK DIFFERENT:

## MICRO-ALGORITHM ECOSYSTEM

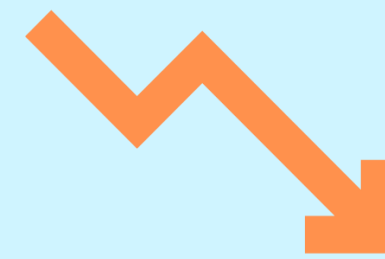

- Micro-Algorithms focus on the small parts of a complex problem
- Under the control of a conductor algorithm
- Micro-Algorithms use the multi-thread platform
- Historical data interpretation, AI & machine learning

# MICRO-ALGORITHM ECOSYSTEM

## Advantages

- Simple to model
- Quicker response & more accurate results
- Less source demand

## Challenges

- Unable to see the big picture

# AI & ML

## What Does It Provide?

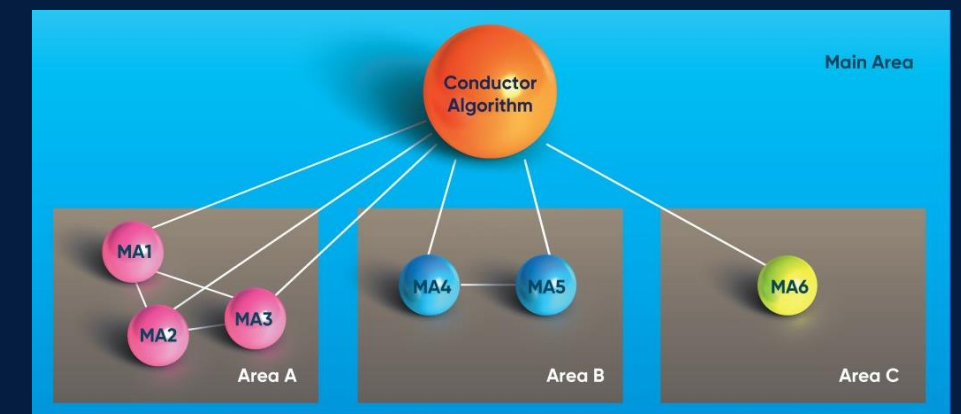

- Helps produce efficient modules
- Learns from the past & improves future decisions

## Challenges

- Ports have complex operational challenges
- Much past-present data to be processed into AI
- Processing historical data requires huge resources

## A Better Solution

- By creating a scalable environment by Micro-Algorithms, AI & ML can be used more efficiently

# The Impact of Micro-Algorithms & AI on Terminal Operations

Standardization ensured by AI in port operations

---

Improve business operations & efficiency

---

Optimize management decisions

---

Enable quick & accurate decision-making for port operation predictions

---

Lower operational costs

---

Improve utilization of assets & profitability

**THANK YOU!**
