

AICON SOLUTION SUITE

Solving the Paradox:

Increased Throughput; Reduced Emissions

OCTOBER 25, 2022

Who we are

We deliver adaptive AI solutions that enhance operational systems and decision-making, to increase Container Terminal productivity and efficiency

We combine domain knowledge and disruptive thinking with innovative technology that continually self-adjusts to the most demanding and dynamic conditions

Our AICON Solution Suite is unique to the industry as it provides directly embedded intelligent answers that help you realize your KPI's

Headquarters
New Jersey, USA

Design Centers
Bengaluru, India | Porto, Portugal

Expertise
Artificial Intelligence, Machine Learning,
Operations Research and
Big Data Engineering

Model
Software-as-a-Service

What Industry problem are we addressing?

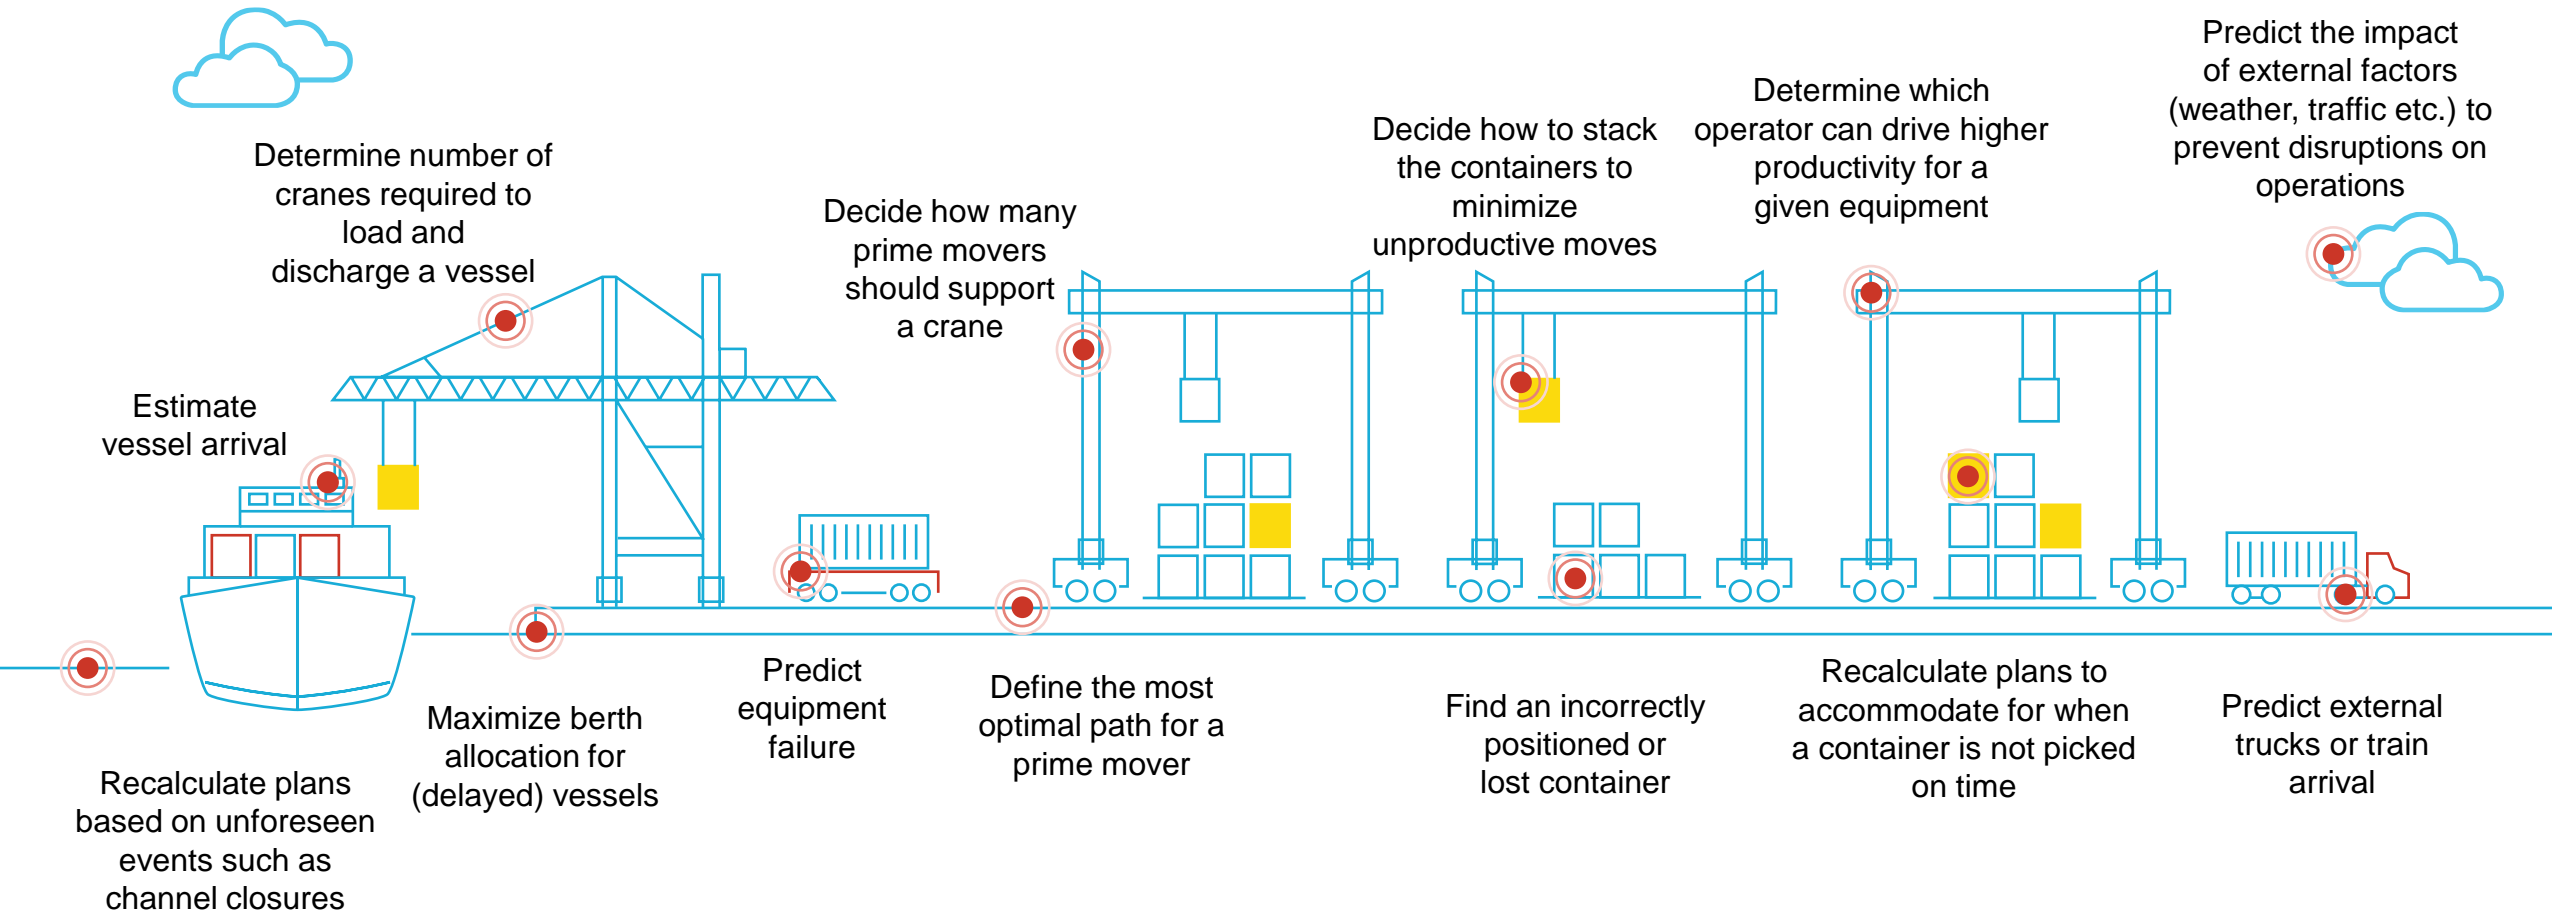

Current
systems deliver
sub-optimal
planning

2+
unnecessary
moves per
container

**UP TO
\$30**
in handling costs
caused by
inefficiencies

Where can AI make a difference

AICON

Easy-to-use

Intelligent

Adaptive

Experience-Driven

Solution Suite for Container Terminals

- AICON is an AI Solution Suite that works as a **TOS Plug & Play accelerator**, containing a set of cross-functional modules that operate on a stand-alone basis or stacked as a complete solution

- Its AI modules, assimilate data from TOS, Management and Operational subsystems & external sources to **generate visibility** across the Terminal

- Compared to rule-driven TOS, AICON's machine and deep learning algorithms quickly and continuously **adapt to shifting business goals**

01

Case Study

Customer Pain Point

- Limited Gate Delivery Throughput especially during peak hours

Business Objective

- Maintain or Increase the yard throughput with increased terminal occupancy (greater than 85%)

YardSight – Housekeeping

Solution

- Use YardSight to optimally and automatically housekeep containers for incoming trucks to improve the efficiency of each truck transaction, starting with deliveries (Phase 1)
- Expand YardSight's capabilities to include Load, Discharges, and Deliveries (Phase 2)

Success Metrics

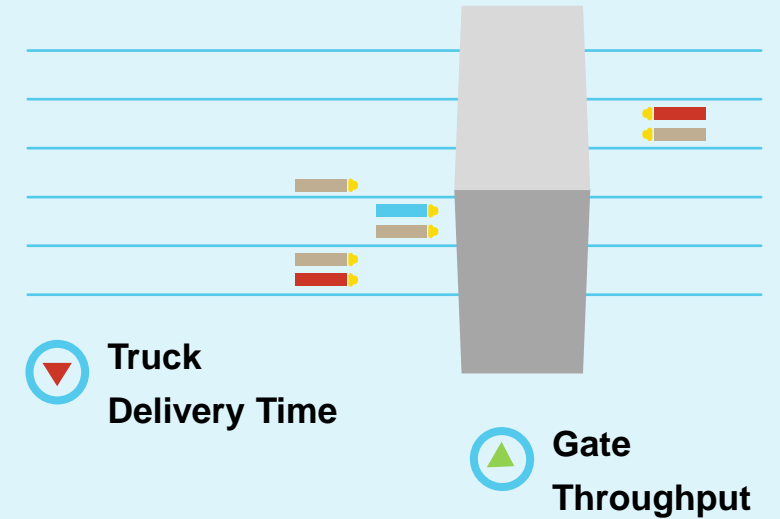

- Reduce rehandles per delivery
- Reduce truck turnaround time per delivery

AI-Driven Housekeeping

Optimize housekeeping: reduce re-handles, and minimize travel distance

Truck
Delivery Time

Gate
Throughput

15% Reduction in the re-handle rate after
AI-based optimization of housekeeping

Results

YardSight has improved overall delivery efficiency by 19.4% in the last ten weeks

Results for:

- The previous 2 months; Including weekly trend
- About 20% of the yard controlled by YardSight
- For Trucks that had an appointment

Note:
 Selected = Avlino Stacks
 Non-Selected = Non – Avlino Stacks

YardSight

**Automated yard
planning module**

Optimal Housekeeping

**Smart Equipment
Utilization**

**Next generation
Stacking Strategy**

**AI-generated
work queues**

Smart Planning for Efficient Cost Reduction

Ideal Container Location

Minimize future
unproductive moves

Block Optimizing

Minimize CHE
utilization and travel
time

Congestion Solving

Reduce Truck turn
around time and meet
related SLAs

02

Case Study

Import Operations

Client

- 3.3M TEU Manual RTG Operation
- High Yard Utilization

Challenges

- Uneven RTG Workload distribution
- High Rehandle Count
- Lower Productive Moves %

Solution

- Deploy AICON's Yard Optimization module: YardSight

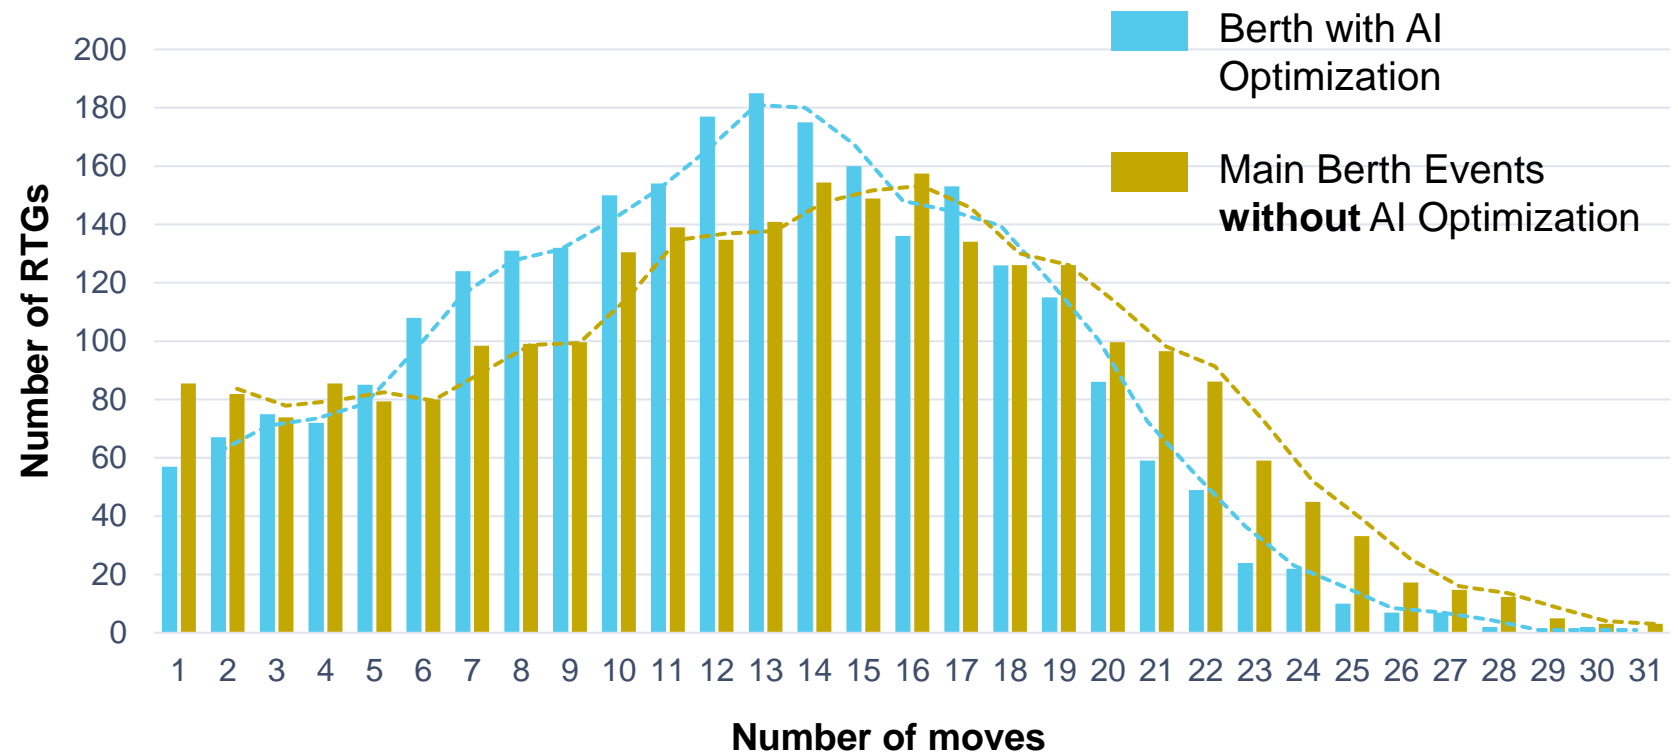

AI Optimization Results

The client quickly saw an improved bell curve with better RTG work distribution.

- ~15% Positive shift
- Reduced turn for internal PM ~2 minutes too

Discharge RTG Work Distribution, May 2021 with same Average Prod.

PM METRIC [BERTH 6/ IMPORT]

Improvement in PM Active Time

Within YardSight Physical Access	1-3 months prior to YardSight implementation		1-3 Months post YardSight implementation	
	Total Moves	18,000	Total Moves	16,500 ▲
YardSight	Number of PMs	34	Total Number of PMs	30 ▲
	Productivity Enhancement Metric – This metric demonstrates the reduction in the total numbers of moves, and reduction in the total number of Prime Movers to accomplish the total moves			
	Active Time	73 hrs.	Active Time	91 hrs. ▲
	Inactive Time	94 hrs.	Inactive Time	76 hrs. ▲
	Productivity Enhancement Metric – This metric demonstrates the increase in productive utilization of the Prime Movers. i.e. by increasing the active (laden) time.			
Yard	Productive Moves	15,000	Productive Moves	15,500 ▲
	Total Moves	18,000	Total Moves	16,500 ▲
	Productivity Enhancement Metric – This metric demonstrates the increase in profitability and efficiency, by reducing the number of unproductive moves			

Metrics indicated are from a subset of weekly operations

RTG METRIC [BERTH 6/ IMPORT]

Reduce distance traveled and increase productive moves

Within YardSight Physical Access	1-3 months prior to YardSight implementation	1-3 Months post YardSight implementation
	Total Moves = 17,000	Total Moves = 21,000 ▲
	Number of RTGs = 10	Total Number of RTGs = 9 ▲
	Productivity Enhancement Metric – This metric demonstrates the reduction in the total numbers of moves, and reduction in the total number of RTG to accomplish the total moves	
	Total moves = 17,000	Total moves = 21,000 ▲
	Total distance travelled = 350 Km	Total distance travelled = 287 Km ▲
	Productivity Enhancement Metric – This metric demonstrates the increase in productive utilization of RTG's, by reducing the distance traveled for a given number of moves	
Yard	Productive Moves = 15,000	Productive Moves = 19,500 ▲
	Total Moves = 17,000	Total Moves = 21,000 ▲
	Productivity Enhancement Metric – This metric demonstrates the increase in profitability and efficiency, by reducing the number of unproductive moves	

Metrics indicated are from a subset of weekly operations

YARD METRICS

Reduce unproductive moves

		Re-handle Reduction		
Within YardSight Physical Access	1-3 months prior to YardSight implementation	1-3 Months post YardSight implementation		
YardSight	Avg Re-handles Per Container in the Past Month For Deliver	= 1.65	Avg Re-handles Per Container in the Past Month For Deliver	= 1.4 ▼
	Yard Utilization in the Past Month	85%	Yard Utilization in the Past Month	85%
	Productivity Enhancement Metric – This metric demonstrates the increase in profitability based on reduced number of rehandles			
	Containers Delivered	20,000	Containers Delivered	20,000
	Total Unproductive Moves	33,000	Total Unproductive Moves	28,000 ▼
Yard	Productivity Enhancement Metric – This metric demonstrates the increase in productivity and profitability based on reduction in unproductive moves			
	Total Moves	53,000	Total Moves	48,000 ▼
	Productivity Enhancement Metric – This metric demonstrates the increase in profitability and optimized equipment utilization by reducing the total number of moves			

Metrics indicated are from a subset of weekly operations

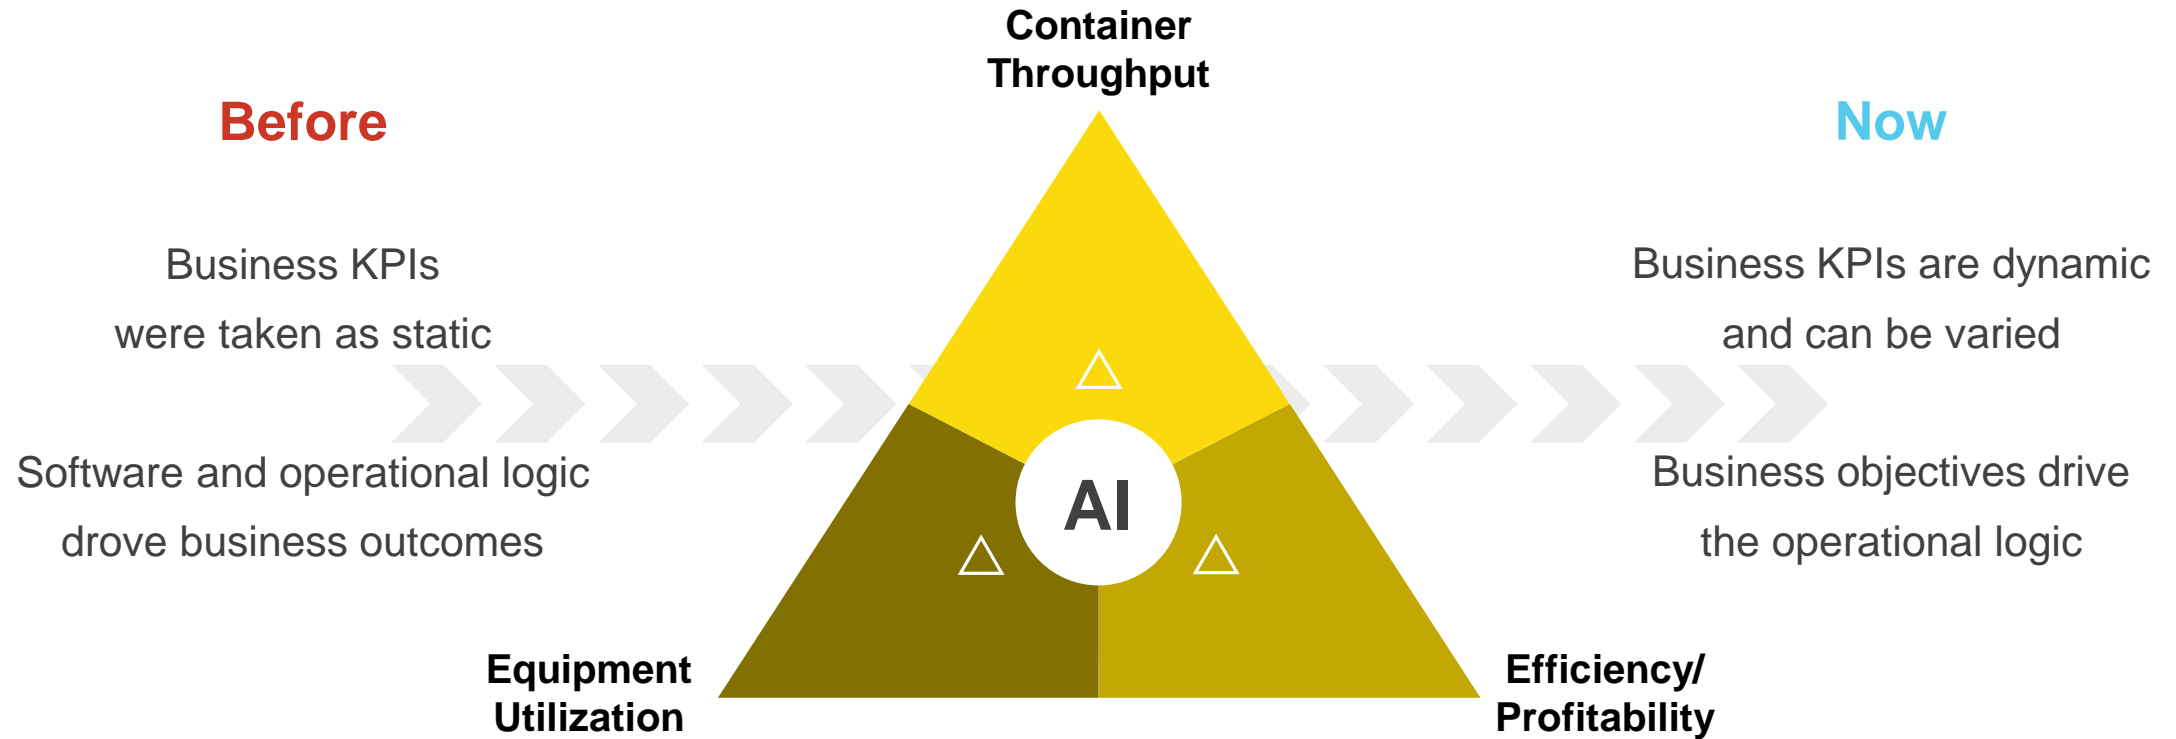

CONTAINER SLOT METRICS [BERTH 6/ IMPORT]

Processed more containers within the same time

Within YardSight Physical Access		Current TOS Estimated Time		YardSight Position Cost Estimated Time	
	Total Time (Hours)	=	168	Total Time (Hours)	= 168 ▲
	Number of Containers	=	20,000	Number of Containers	= 21,000 ▲
	Productivity Enhancement Metric – This metric demonstrates the optimization of human and equipment utilization based on reduction in time/effort required to move a given # of containers.				
	Overhead Time (Hours)	=	42	Overhead Time (Hours)	= 31 ▲
	Active Time	=	126	Active Time	= 137 ▲
Productivity Enhancement Metric – This metric demonstrates the reason for the increased efficiency – attributed to increased laden time and reduction in overhead hours					
Estimated Position Cost = RTG Travel Time + Container Put Time + Container Get Time + Estimated Container Shift Time
